PROFILE

4th-year Informatics Engineering student at the University of Buenos Aires (FIUBA). Focused on robust backend architecture, with hands-on experience in Java, Python, and C++. Actively seeking a first professional IT internship to apply strong problem-solving skills, knowledge of concurrent systems, and a proactive mindset to complex, scalable engineering challenges.

EDUCATION

Universidad de Buenos Aires (FIUBA)

2023 – Present

Informatics Engineering

- Status: 24/30 mandatory subjects completed (4th year in progress).

TECHNICAL SKILLS

- **Languages:** Rust, Go, Python, TypeScript, Java, C++
- **Frameworks & Infrastructure:** Spring Boot, FastAPI, Actix, React, PostgreSQL, Docker, Git, Linux
- **Core Competencies:** Concurrent Programming, Actor Model, Synchronization Primitives, OOP

FEATURED PROJECTS

Consorcio Management Platform

Python (FastAPI), TypeScript

- Engineered a full-stack web application to automate building management workflows for administrators and owners.
- Developed robust backend modules to meticulously track home unit debts and automate the generation of monthly expenses.
- Architected an interactive frontend dashboard to visualize critical consortium metrics using modern APIs.

Distributed Bicycle & Banking System

Rust, Actix

- Designed a fault-tolerant, concurrent distributed system coordinating a network of bike-sharing stations over a logical ring.
- Implemented the Actor model to manage isolated state and handle asynchronous execution safely without explicit low-level lock contention.
- Integrated a replicated banking cluster running a Two-Phase Commit (2PC) consensus protocol to ensure transactional integrity.

Need for Speed Clone (Multiplayer Engine)

C++20, Box2D, POSIX Sockets

- Architected the multiplayer backend for a racing game from scratch, managing concurrent lobbies and real-time game states using a custom binary serialization protocol.
- Engineered thread-safe data structures, including a custom MPMC blocking queue, to synchronize network handlers with a 60-FPS game loop.
- Integrated Box2D on the server for authoritative rigid body dynamics, ensuring a deterministic and cheat-resistant collision simulation across clients.

EXPERIENCE

Sales Associate & Cashier

Jul 2025 – Aug 2025

Equus Argentina

- Delivered personalized customer service and managed high-volume sales transactions in a dynamic commercial environment.
- Developed strong adaptability, attention to detail, and rapid problem-solving skills highly applicable to fast-paced engineering teams.
