PROFILE

4th-year Computer Engineering student at the University of Buenos Aires (FIUBA). Focused on developing robust backend architectures, with hands-on experience in Java, Python, and C++. Seeking my first professional IT internship to apply strong problem-solving skills, knowledge of concurrent systems, and a proactive mindset to complex and scalable engineering challenges.

EDUCATION

University of Buenos Aires (FIUBA) 2023 – Present
Computer Engineering

- Status: 24/30 mandatory courses completed (4th year in progress).

TECHNICAL SKILLS

- **Languages:** Rust, Go, Python, TypeScript, Java, C++
- **Frameworks & Infrastructure:** Spring Boot, FastAPI, Actix, React, PostgreSQL, Docker, Git, Linux
- **Key Competencies:** Concurrent Programming, Actor Model, Synchronization Primitives, OOP
- **Languages:** Spanish (Native), English (B2 Level)

HIGHLIGHTED PROJECTS

Building Management Platform *Python (FastAPI), TypeScript*

- Developed a full-stack web application to automate building management workflows for administrators and tenants.
- Implemented robust backend modules to meticulously track unit debts and automate the generation of monthly common expenses.
- Designed an interactive frontend dashboard to visualize critical building metrics using modern APIs.

Distributed Bicycle and Banking System *Rust, Actix*

- Designed a concurrent, fault-tolerant distributed system coordinating a network of bicycle stations via a logical ring.
- Implemented the actor model to manage isolated states and handle asynchronous execution safely, without explicit low-level lock contention.
- Integrated a replicated banking cluster running a Two-Phase Commit (2PC) consensus protocol to guarantee transactional integrity.

Need for Speed Clone (Multiplayer Engine) *C++20, Box2D, POSIX Sockets*

- Designed a multiplayer backend from scratch for a racing game, managing concurrent lobbies and real-time game states through a custom binary serialization protocol.
- Developed thread-safe data structures, including a custom MPMC blocking queue, to synchronize network handlers with a 60 FPS game loop.
- Integrated Box2D on the server for authoritative rigid body dynamics, ensuring deterministic and cheat-resistant collision simulation across all clients.

WORK EXPERIENCE

Equus Argentina Jul 2025 – Aug 2025
Sales Associate & Cashier

- Provided personalized customer service and managed high-volume sales transactions in a fast-paced retail environment.
- Developed strong adaptability, attention to detail, and rapid problem-solving skills, highly applicable to fast-paced engineering teams.
